The listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) A method for storing memory card usage information on a memory card, comprising:
 - collecting information about usage of the memory card using a processor;
 - recording the information about usage of the memory card in an area of memory of the memory card;
 - accessing the information about usage of the memory card from the area of memory of the memory card using a processor wherein there are a plurality of event descriptors and wherein said accessing step comprises displaying a plurality of the event descriptors on a display on the memory card, wherein each of the displayed plurality of events descriptors is selectable, so that on selection, additional usage information will be displayed that is associated with that selected event descriptor; and
 - displaying the information about the usage of the memory card on a the display on the memory card.
2. (Original) The method as defined in claim 1, wherein the collecting step comprises monitoring write events, read events and power-on events.
3. (Original) The method as defined in claim 1, wherein the collecting step comprises changing a count associated with an event descriptor when the event occurs.
4. (Previously Presented) The method as defined in claim 3, wherein the collecting step further comprises storing a value parameter associated with said event descriptor when the event occurs.
5. (Previously Presented) The method as defined in claim 3, wherein the collecting step comprises changing a running total associated with said event descriptor when the event occurs.

6. (Original) The method as defined in claim 1, wherein the recording step comprises recording the information about usage in a dedicated area in said memory card.

7. (Previously Canceled)

8. (Previously Amended) The method as defined in claim 1, wherein the collecting step comprises changing a count associated with an event description when the event occurs; and wherein the accessing step comprises displaying the count on the display on the memory card.

9. (Cancel) The method as defined in claim 1, wherein there are a plurality of event descriptors; and wherein said accessing step comprises displaying a plurality of the event descriptors on the display on the memory card, wherein each of the displayed plurality of events descriptors is selectable, so that on selection, additional usage information will be displayed that is associated with that selected event descriptor.

10-11. (Previously Canceled)

12. (Previously Amended) The method as defined in claim 1, further comprising the step of creating write and read commands allowing a host to store the information about usage and read that information.

13. (Original) The method as defined in claim 1, wherein the collecting step comprises changing a count associated with an event descriptor when the event occurs; and further comprising the steps of comparing the count to a threshold, and if the threshold is equaled or exceeded, then causing a message to be sent.

14. (Cancel) A data structure in a memory card, comprising, computer readable storage containing at least one event descriptor about the usage of the memory card, and for each event descriptor a count representing the number of occurrences of that event, wherein for each of a plurality of event descriptors an amount of memory used by an aggregation of events corresponding to respective each of the event descriptors is provided.

15. (Previously Canceled)

16. (Currently Amended) A system for storing memory card usage information on a memory card, comprising:

an area of memory of the memory card for recording information about usage of the memory card;

processor for collecting the information about usage of the memory card for accessing the information about usage of the memory card from the memory card wherein collecting information further comprises counting a number of times an image file was written to the memory card; and

a display on the memory card for displaying the information about the usage of the memory card.

17. (Currently Amended) A method, comprising:

collecting information about usage of a portable memory card in an electronic device using a processor wherein collecting information further comprises counting a number of times an image file was written to the memory card;

recording the information about usage of the memory card in an area of memory on the memory card itself; and

displaying the information about the usage of the memory card on a display on the memory card.

18. (Previously Presented) The method of claim 17 wherein collecting information further comprises counting physical insertions of the memory card into the electronic device.

19. (Previously Cancelled)

20. (Cancel) The method of claim 17 wherein collecting information further comprises counting a number of times an image file was written to the memory card.

21. (Previously Presented) The method of claim 17 wherein collecting information further comprises counting a number of times music files were written to the memory card.

22. (Previously Presented) The method of claim 17 wherein collecting information further comprises tracking a number of times the memory card is formatted.

23. (Currently Amended) A method, comprising:
providing a portable memory card;
monitoring usage of the memory card using a processor;
collecting information about usage of the portable memory card wherein collecting information further comprises counting a number of times an image file was written to the portable memory card;

storing the usage of the memory card in an area of memory on the memory card; and

displaying the usage of the memory card on a display on the memory card.

24. (Previously Presented) The method of claim 23 wherein displaying the usage further comprises displaying the usage on a window on the memory card.

25. (Previously Presented) The method of claim 23 wherein displaying the usage further comprises displaying the usage on a screen on the memory card.

26. (Previously Presented) The method of claim 23 wherein monitoring usage comprises monitoring an amount of memory used on the memory card and monitoring an amount of memory remaining free on the memory card.

27. (Previously Presented) The method of claim 23 wherein providing a portable memory card further comprises providing the portable memory card in a digital camera.

28 -29. (Previously Canceled)

30. (Currently Amended) A method for storing memory card usage information on a memory card, comprising:

collecting information about usage of the memory card using a processor
wherein collecting information further comprises counting a number of times an
image file was written to the portable memory card;

recording the information about usage of the memory card in an area of
memory of the memory card; and

accessing, using a processor, the information about usage of the memory
card from the memory card, wherein the information about usage of the memory
card comprises at least one of a measurement of how full the memory card is
and the number of times data was corrected by the memory card.

31. (Previously Presented) The method of claim 30, wherein the
information about usage of the memory card comprises a measurement of how
full the memory card is.

32. (Currently Amended) A system for storing memory card usage
information on a memory card, comprising:

an area of memory of the memory card for recording information about
usage of the memory card; and

a processor for collecting information about usage of the memory card
and for accessing the information about usage of the memory card from the area
of memory of the memory card, wherein collecting information further comprises
counting a number of times an image file was written to the portable memory
card and wherein the information about usage of the memory card comprises at
least one of a measurement of how full the memory card is and the number of
times data was corrected by the memory card.

33. (Previously Presented) The system of claim 32, wherein the
information about usage of the memory card comprises a measurement of how
full the memory card is.
